

Correct Deployment

Please note that the cradle is supplied with red and green ends and centres on the fixing end of the cradle. This end should be attached to the vessel. This ensures the correct orientation of the cradle when deployed over the side.

The red end is held in the left hand and the green end is in the right hand when standing on the deck facing to sea.

Please read "Rescue Procedure" for commercial craft enclosed with this rescue device.

Should you have any queries with fixing, please do not hesitate to contact us at Jason's Cradle. U.K.
